

BUILDING NEWS

WHAT DOES THE NCBE CRAB FEED FUND-A-NEED SUPPORT?

Scholarships

The event to date has generated **\$562,550** and invested in 1,145 students over the past two decades. These scholarships help students interested in construction pay for their college courses.

Scholarship Applications will be open and available on our website soon!

North Bay Construction Corps

NBCC is an after-school, 3-month basic construction training program for seniors in their last semester of high school. Classes are taught by local contractors and construction managers. Participants are introduced to a variety of trades and earn certifications in Personal Protective Equipment and CPR/First Aid.

Teacher Grants

NCBE is proud to provide grant monies to teachers to use on supplies and tools for their classes. These grants are set up in an account at a local construction supply store so that the awardee teacher can spend it down over the school year for supplies to use with students. The grants range anywhere from \$250 up to \$2000, depending on the need.

When you participate in our fund a need, raffle, auction, and events, you help us make these programs possible for the students in the county! We thank you, and so do the students!

Final Privacy Regulations Anticipated To Go Into Effect In April 2023 - Enforcement Scheduled to Start July 1, 2023

By: Dan M. Forman, Linda Wang

On February 14, 2023, the California Privacy Protection Agency (CPPA) submitted its proposed final regulations (“Regulations”) to the Office of Administrative Law for a final review. It is anticipated that Regulations will go into effect in April 2023. The CPPA is California’s regulatory agency dedicated to enforcing consumers’ and employees’ privacy rights. The projected enforcement date remains July 1, 2023, so California employers should take proactive steps to comply with the California Privacy Rights Act (CPRA) as explained by the Regulations. Nonetheless, the California Attorney General has already begun and continues to enforce the CPRA.

The Regulations provide some guidance on a variety of topics including opt-out mechanisms, mandatory recognition of opt-out preference signals, and the handling of employee requests. Employers are still required to give privacy notices to applicants and employees, maintain a privacy policy, engage in data mapping, address employees’ requests to delete or correct their personal information, and ensure third parties are not using employees’ personal data for unauthorized purposes.

The Regulations provide some relief with respect to private information stored on old systems. Covered entities may “delay compliance with requests to correct, with respect to information stored on archived or backup systems until the archived or backup system relating to that data is restored to an active system or is next accessed or used.” In other words, if the information is stored on a system that is not active, an employer might not have an immediate obligation to delete or correct such information unless that system comes back into usage.

The Regulations also refined the definition of “disproportionate effort” to give relief to third parties associated with an employer. The Regulations indicate that an employer might be relieved from taking action if the action would require a disproportionate effort or resources that outweigh the reasonably foreseeable impact on the employee. However, there is no bright-line test to provide guidance on how the CPPA will interpret those terms in the real world. Thus, an employer that avoids taking action under this portion of the Regulations should be sure to consult with competent counsel before making its final decision.

The Regulations highlighted the importance of “good faith” in complying with the CPRA. As the official enforcement body under the CPRA, the CPPA has the discretion to “consider all facts it determines to be relevant, including the amount of time between the effective date of the statutory or regulatory requirement(s) and the possible or alleged violation(s) of those requirements, and good faith efforts to comply with those requirements.” The Regulations, along with recent comments from the CPPA’s officers at the California Lawyer’s Association Privacy Conference, indicate that the CPPA will give serious weight to employers who engage in good faith efforts at compliance and encounter documented difficulties carrying out privacy policies. At least in the early days of enforcement, one may optimistically expect greater leniency for employers who demonstrate a clear-cut good faith effort to comply with the CPRA as opposed to employers who claim ignorance or those who flaunt the Regulations. Therefore, if an entity is a covered entity, it should consult with counsel to prepare notices, policies, training and have procedures in place that comport with the CPRA’s obligations to honor employee privacy.

If you are a California employer, make sure you have your ducks in a row before July 1, 2023. Contact your favorite CDF attorney to assist you with your privacy policy.

The Secret Ingredient to Safety Excellence

Doug Sterbenz

As a safety professional, your role is to develop, implement and oversee the safety programs within your company. You are also responsible for the most important thing in your company: the employees, along with their health and well-being.

You have a real impact on the quality of people's lives. Think about it. At the end of the day, when everybody's headlights are pointed toward the gate, what condition will they be headed home in? How will they feel? What will their attitudes be? You play a very important role in determining those outcomes. That makes you a very important person.

Embrace your role as a powerful leader by learning how to use the secret ingredient to achieve safety excellence.

Off the Shelf Safety Programs

There's no shortage of ideas on how to improve safety culture. There are conferences dedicated to safety; books about best practices and other techniques to improve safety; and numerous companies that sell safety programs.

For many companies, a prepackaged or canned safety program is attractive. It sounds so simple. You buy the program. You teach the people in your organization to use said program. Maybe you bring in an outside trainer to help you implement it. Then, you sit back and hope it works.

Unfortunately, with these canned safety programs, it is difficult to establish ownership. Instead of your employees owning the new safety program, they become renters. People approach renting something differently than if they own it.

Think about the last time you rented a car. How many times did you hand wash and wax that rental car? Did you even clean out the car before you returned it? We can't expect employees to approach safety programs that are foisted upon them any differently.

Canned safety programs are not inherently bad. In fact, there are many high quality canned safety programs and techniques available on the market. But without employee buy-in or ownership, your program will not achieve the results that you seek: zero accidents and injuries. Without ownership, your new safety program at best becomes the flavor of the week, at least until another crisis or executive's pet project takes priority.

However, there is a way to approach safety that can lead to lasting improvements that can work for every organization. It is the key to achieving safety excellence and the glue that will hold all your safety efforts and existing safety programs together. This secret ingredient transforms workers from renters to owners of their safety culture.

The Secret Ingredient

I can't speak for all safety professionals, but it seems that safety leaders often crave the support of their top-level executives. Some believe that if leadership advocates for safety, all their safety problems would be solved. They think that having the company executives out front and leading the program is the secret ingredient to success.

In my experience, top-level leadership is part of the recipe, but it is not the secret ingredient. Some people believe the secret ingredient is involvement. They say we need to involve everybody: supervisors, frontline workers and everyone in the back office, too.

But what exactly is involvement? Involvement makes it sound like we have a very small part to play, and we wait around to be told what to. In my opinion, that sounds passive because no one is taking ownership of either the problem or the solution. Involvement is important. So is commitment. But neither are the secret ingredient that elevates a safety program from good to great.

The Award-Winning Recipe

Before I reveal the secret ingredient of safety excellence, I need to first introduce you to some people who make the recipe successful.

Gator the Mechanic - Gator is a gruff, straight shooting, no-nonsense mechanic at one of the largest industrial facilities of its kind in the U.S. (His real name is Brad Miller.) At first, he disagreed with just about every element of our safety program. He went toe to toe with the safety leaders about zero accidents being impossible and about discipline for safety violations.

More on Page 8

The Secret Ingredient to Safety Excellence

Page 7

We sent Gator to a safety conference to learn more about a specific safety program. I don't know the entire story of what happened at that conference, but now Gator carries the flag for safety. What's more, the plant he works at is an OSHA Voluntary Protection Program site that carries the Star Status, symbolizing it is the best of the best in safety.

In his role as a mechanic, Gator does not have formal authority in the organization, but he has tremendous influence. He knows that he did not change safety at that plant by himself. He also does not wait around until he is given some fancy title to act. He leads at his current level. Gator is still a mechanic, but he is also a leader in his union. Gator is far from the only employee who displays leadership qualities in the organization.

Randy the Operator - Meet Randy Bickford. Randy was an operator at what could be considered one of our worst performing plants. It was not a happy or safe place to work, nor was it productive.

Randy led from the trenches. He was one operator in a large power plant. We didn't give him a big title. We didn't give him formal authority over other people. We didn't give him staff members to formally oversee, but he still made a difference in that plant's safety program.

The plant improved thanks to Randy and a bunch of hard-working and committed people. In fact, the plant went from worst to first in safety and has thrice won the CEO Safety Award, an internal award our chief executive bestows to one location each year. (If your company doesn't already have such an award program, you should consider establishing one.) The plant's awards and track record are evidence the workers accomplished that feat, and they continue to make improvements.

Randy knows that he did not change safety at that plant by himself, but he did not wait around until the time was right or he had formal authority to make it happen.

Robin the Safety Leader - Meet Robin Seele. Robin does have a formal safety title, some formal authority, staff to oversee and a lot of influence. Robin took an existing safety program that was good and made it excellent. He has an excellent safety program today because he added the secret ingredient.

That's because Robin knows that it wasn't only his leadership, and he didn't accomplish anything alone. Organizational and culture change requires many people with a common vision all pulling in the same direction.

Upper Management's Role

Our top brass was certainly involved in each of these plant's safety transformations. However, the top leaders really became committed after we had these and other people leading at all levels of the company.

That's because it's easy for leaders to get on board once they see evidence of success. Great leaders know that vision is critical but standing behind people already doing the work is equally important.

The momentum grew organically. One leader after another became committed to safety, and it was evident by their actions. Safety became the thing that united our efforts and, in a way, became our noble purpose.

Real safety leaders at all levels in the organization ensure success because it means that there is buy-in and ownership of safety, which is crucial for getting organizational change off the ground. A top-down approach from leaders who may not understand the impact of those edicts can never have the same level of success as a grassroots or bottom-up approach.

The Secret Ingredient

When Gator committed to being present for safety every day and encouraged others to get on board, he became part of the secret ingredient. Likewise, when Randy influenced others to follow his lead to create a safe work environment, he became part of the secret ingredient. And when Robin listened to advice from experts and used his formal authority to implement new safety measures, he also became part of the secret ingredient.

Are you ready for the secret ingredient? It's committed leaders at all levels.

The Secret Ingredient to Safety Excellence

Page 8

You can perfect your own recipe for safety excellence by developing leaders at every level. The secret ingredient is not necessarily rare. In fact, it doesn't necessarily cost a lot, but it does require many people being willing to try new things and an expert who can successfully find the right combination and balance.

I guarantee that you already have the raw ingredients at your workplace. You have people like Gator, Randy, and Robin in your organization right now. Your job is to find them, engage them and empower them. The best way that I know to find those safety leaders is to give them some responsibility.

You don't need to give them a fancy new title or promotion. In fact, I don't recommend this because you will be moving them out of the very environment they need to be in to be effective. However, you do need to give them a platform and opportunities to demonstrate their value to others, especially to upper management. You also need to invest in them and commit to their success, such as through informal or formal training. Give them some skin in the game, and they'll surprise you with what they will do. They are the glue that will hold your program together.

Conclusion

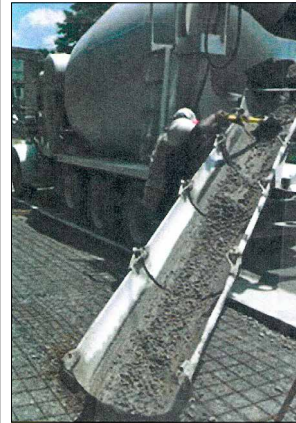

Gator, Randy and Robin represent true safety leadership because they lead at the level in which they each work. They do what they can to improve safety where they are. Moreover, they are humble about their accomplishments and their much-deserved recognition for creating a safer workplace.

There are many more people at the company who I did not mention, but they have also made important contributions to the workplace. I find that looking at every worker as a safety leader allows me to see the potential in each conversation you have, brochure you produce, and training you conduct to recruit and cultivate more talent on your team.

After all, leadership is what you do—not the position or title that you hold. Once you realize that, you've unlocked the secret ingredient to safety excellence. Now, you can see the unlimited possibilities, rather than barriers, for success.

How to retain workers when a megaproject comes to town

By Robyn Griggs Lawrence

With trillions of dollars in new work coming online this year, contractors — already struggling to retain craft workers during a historic shortage — now face the challenge of competing with big projects that come to town with a lot to offer workers.

This year, the \$1.2 trillion Infrastructure Investment and Jobs Act and the CHIPS and Science Act, which allocates \$39 billion to build and expand semiconductor manufacturing plants, will create thousands of new construction jobs — on top of what Ken Simonson, chief economist for Associated General Contractors of America, called “an unusually large concentration of really large projects right now.”

“A remarkable number of multibillion-dollar projects are showing up in many states,” Simonson said. “In many cases, the owners of these projects, while not insensitive to cost, may have more flexibility and willingness to pay and offer a range of benefits that smaller companies can’t.”

When projects compete for the top available labor, “it gets messy,” said Portland, Oregon-based Eric Grasberger, construction and design group chair of national law firm Stoel Rives.

“In order to compete, the contractors on those jobs have to go to the owners and say, ‘We can’t get the labor, and we’re not going to get the labor unless you authorize an increase in the hourly wages, the per diem or both — or perhaps other incentives,’” Grasberger said.

To attract and retain workers, many local companies are finding more compelling benefits well beyond money. They’re offering everything from hot meals and heated bathrooms on jobsites to paid volunteer and educational opportunities that may even extend to workers’ families.

“They’ve got to sell something bigger than just a project, because typically those industrial projects pay a lot more per hour than your average contractor might pay,” said Greg Sizemore, vice president of workforce development, safety, health and environmental for Associated Builders and Contractors. “In middle-class America, it’s about selling the value, which is beyond just the dollar.”

Free lunch, wellness centers

In central Ohio, megaprojects are becoming the norm rather than the exception — a \$20 billion semiconductor manufacturing plant for Intel, a \$4.4 billion electric vehicle battery plant for Honda, data centers for Google and Amazon,

and a biomanufacturing plant for Amgen are just a few.

The flurry of building activity means construction workers have the potential to make as much as \$135,000 per year, said Dorsey Hager, executive secretary-treasurer of the Columbus/Central Ohio Building & Construction Trades Council.

Throwing more money at workers to keep up with megaproject salaries is not an option for many local contractors, but Dorsey said it’s probably not the most effective tactic anyway. In their efforts to hang onto workers, central Ohio construction firms are offering amenities such as free breakfast and lunch, onsite wellness centers, heated restrooms and changing areas and convenient paved parking, he said.

Sizemore said tradesworkers used to ask just three questions when considering a job: how much it paid per hour, how many hours they would work and what the per diem was.

“Now, the whole world’s changed,” he said. “We’ve got new people coming into the industry who are looking for opportunities to go to work for contractors that have a long-term value proposition that meets their needs — things like paid time off, maternity and paternity leave.”

Younger generations of workers are asking more questions about company culture, what types of projects they would be working on and even safety protocols, said Keyan Zandy, CEO of Skiles Group, a mid-size general contractor in Dallas.

“It’s about not treating your labor like they’re a secondary component of what you do,” he said. “That’s really the main thing—we should be doing everything we can to empower these people because if it weren’t for them, nothing would ever get built.”

While smaller firms might not be able to compete when it comes to salaries, they have the advantage of being able to offer workers more personal relationships with owners and senior management and possibly even meaningful ownership shares, Sizemore said.

“It really is about making people feel like they’re a part of something as opposed to just working for Amazon,” he added.

25th annual Women in Construction Week celebrates many paths to success

NAWIC

Ask Lauline Mitchell about opportunities for women in the construction industry and her face lights up. Then she begins counting off the many job categories, the need to fill positions at all levels and the higher pay that comes with a career in construction. Mitchell is the president of NAWIC, the National Association of Women in Construction and she will be a featured speaker at an event in Michigan for this year's WIC Week taking place March 5-11.

WIC Week is short for Women in Construction Week, a series of events around the country that celebrates the roles of women in the construction industry. NAWIC is the creator and sponsor of WIC Week since it was launched by their organization 25 years ago. This year's WIC Week celebrates its anniversary with a theme of "Many Paths. One Mission," which speaks to the goal of bringing more women to the industry at all levels.

"At NAWIC, we spend much of our time educating women on the tremendous opportunity the construction industry offers," says Mitchell, who works as a director of preconstruction in Oakland, CA and has had a 20-year career in construction, "WIC Week is one of our best chances to showcase the role of women in the industry. There is a strong demand to fill positions at all levels of the industry and the gender pay gap is one of the smallest of any industry." In fact, the gender pay gap in construction is estimated by the Department of Labor to be less than two percent.

What does she think is the ideal ratio of women to men in construction? Without hesitation, she says, "50/50! Why should it be anything else?" There is plenty of room for growth in that vision. Women currently make up 11-13% of the construction industry according to several estimates. "That's part of what's behind the 'Many Paths' theme of this year's WIC Week," Mitchell notes. "We're trying to show that there are many paths to a career in construction for women with a wide range of skills or who are looking to learn them," Mitchell adds that women come to the industry from professions like accounting, insurance, legal, IT and many others. Often the pay range is higher in construction than in the industry they came from.

As WIC Week unfolds from March 5-11, men and women in construction and related industries are invited to take part in a wide range of events happening virtually and in person around the country. Some examples include jobsite tours, networking events, career expos, panel discussions and professional development workshops, service projects, online webinars, career programs for middle and high school girls, and more. Those interested are encouraged to visit the

WIC Week website for information about programs near them or online.

Mitchell adds, "There is so much opportunity for young women and those already established in business to join us in the construction industry. WIC Week is both a celebration and an educational opportunity at the same time. This is our 25th annual WIC Week and I'm looking forward to the next 25 to come."

About NAWIC

The National Association of Women in Construction (NAWIC) originated as Women in Construction of Fort Worth, Texas. 16 women working in the construction industry founded it in 1953 to create a support network for women in construction-related jobs. Today, NAWIC is still based in Fort Worth and has more than 5,100 members and 118 chapters throughout the United States that provide professional development, education, networking, leadership training and public service.

BUILDERS INCENTIVE PROGRAM

**EARN UP TO
\$5,000
A YEAR***

To help support the construction of propane homes in Sonoma County, Blue Star Gas is offering builders and re-modelers up to \$1,000 for each home they build with clean burning, energy efficient propane appliances. Construction professionals are eligible for up to five homes per year, for a total of up to \$5,000!

It's a win-win for you and your customers, who will enjoy the improved energy efficiency, performance, and comfort of a propane home when compared with all-electric counterpart.

Let's Keep This Between Us: The Importance of Third-Party Validation in Data Privacy

Marko Tomic

In recent years, data has become a rapidly growing asset to the construction industry. Though historically the industry has lagged in technical adoption, in the years since the pandemic there has been enormous growth in construction technology and data analytics. However, with this increase in data use, the industry needs to step up its protections, especially around data privacy.

Data Privacy Dictates The Who, What And Where Of Data

Data protection is about the tools and processes used to keep data safe and protected. It can be divided into two main categories: data security and data privacy. Data security involves keeping information safe from threats. Data privacy is about governance, overseeing how data is collected, stored and used.

Data privacy is especially important in collaborative industries like construction, where sharing project data is common practice. Between subcontractors, auditors and other third parties, client data passes through a lot of hands over the course of a job, but knowing who is responsible for keeping it safe and secure is very important.

Since they aren't cyber security experts, contractors rely on their selected tech vendors to provide the appropriate data protections. However, data is not something to take lightly. If a contractor chooses a vendor with poor data privacy protocols, not only are they risking their own data to exposure, but client data as well. Therefore, it is vital that construction companies conduct due diligence when researching vendors that will be handling sensitive information.

Third-Party Validation: Walk The Walk And Talk The Talk

It can be daunting to have to select a trustworthy vendor, especially if you don't have a tech background. Fortunately, there are tools used throughout the tech industry to help demonstrate a vendor's trustworthiness to non-tech-oriented clients. One of the most common is third-party validation.

Third-party validation acts as a kind of fact-check for businesses. It demonstrates that a business's claim has been reviewed by an outside party, often a governing body like an industry association, and has met a set of standards. For example, LEED certification demonstrates that a building has met a certain level of environmental standards.

In data privacy, a third-party validation shows that a company has a thorough understanding of the sensitivities surrounding data and that stringent processes have been put in place to ensure that collected data remains private and secure. There are several different data-privacy validations, the most common ones being HITRUST, ISO and SOC.

Proof To Customers You'll Go That Extra Mile

There is no law that requires companies to receive a certification for data-privacy in the US. Many companies that have one went through the process voluntarily. Receiving such a certification is no easy lift. It requires company-wide participation, significant financial resources, and months of preparation to qualify. However, by doing so, an organization demonstrates to customers that they understand the importance of data protection and are willing to go above and beyond to provide such protections.

Our world has become much more accessible through the use of data, making everything faster and more convenient than ever. But without proper oversight, that accessibility can quickly turn into vulnerability. As high-profile data leaks and cases of undisclosed data collection become more common, individuals and businesses alike are becoming more protective of their data. Partnering with vendors who are third-party certified in data protection is a great way to demonstrate credibility while building trust between yourself and your customers.

HORSEPLAY IN THE WORKPLACE

GotSafety

Horseplay is defined as rough, boisterous, rowdy activity or pranks, and presents a safety hazard that can quickly get out of hand and lead to injury or death. Some examples of horseplay include unauthorized contests, irresponsible vehicle operation, playing around or goofing off, harassment, grabbing, chasing, social pressure to participate in unsafe acts, and joking that includes physical contact. Horseplay is often initiated by a practical joker who is seeking laughs and attention from coworkers. Playing jokes and having fun may seem like a good way to break up the workday, however, horseplay in the workplace is not always harmless, and often interferes with productivity. There are enough hazards on the job without creating new ones. Do not trade safety for amusement; horseplay at work should never be considered entertainment.

RISKS:

Every year there are numerous injuries directly caused by horseplay or pranks on the job. Most workplace accidents can be prevented by being alert to hazards and following safety rules. When employees engage in horseplay, safety rules are often disregarded. Horseplay is usually considered a friendly way to let off steam, but it is dangerous because it creates situations of unnecessary risk due to the unexpected distraction, and can result in humiliation, embarrassment, and sometimes even a desire for revenge. If someone gets hurt as a result of your horseplay or joke, you may be liable for damages. Some incidents where horseplay has resulted in injury have led to criminal prosecution, with the injuries being considered the result of a deliberate act and not an accident.

Some of the risks associated with horseplay include but are not limited to the following:

- Running or chasing another employee can lead to tripping, slipping or falling. It may also lead to a domino effect, causing the intended employee to crash into someone else and possibly fall against heavy machinery and be injured by moving parts. Boxes or open containers of hazardous substances can be knocked over, possibly causing injury to other employees.
- Throwing tools is a form of horseplay that often causes injuries. Employees are in danger of being struck in the head, eye or foot, or cut with a sharp edge.
- Tampering with personal protective equipment can cause damage to or compromise the integrity of the equipment, exposing workers to hazardous substances or conditions.
- Speeding and stunt driving while operating forklifts can cause tipping, injuring the driver or employees nearby.
- Climbing on or under the forks on a forklift or moving crane parts can lead to crushing injuries.
- Pushing, teasing or distracting a fellow employee who is working with machinery can lead to pinch point injuries.

PREVENTION:

Do not initiate horseplay or allow yourself to get pressured into participating in it. Follow all regulations, instructions and safety rules to ensure the protection of all employees and others who may be in the work environment. If a coworker is behaving in an unsafe or unprofessional way, report it to a supervisor. The safety and well-being of all employees is very important. Horseplay and other behavior such as hazing, initiations, or other demoralizing, mean acts that adversely affect safety are considered inappropriate. These activities will not be tolerated and are strictly prohibited.

CONCLUSION:

You are responsible for your own safety. Perform your job correctly, and follow the safety rules and procedures that have been designed to protect you. Failure to follow safety rules is dangerous, not only to yourself but to those around you. Do not encourage horseplay by participating in it or applauding it, for it can quickly turn from entertaining to threatening and become a safety rule violation that results in serious injury on the job.

Remember: Horseplay, hazing, pranks, etc. are forbidden and will not be tolerated.

Top 3 Dozer Maintenance Tips (Plus A Bonus)

Lonnie Fritz - Caterpillar

You know the basics: Check the oil. Change the filters. Grease the moving parts. But where else should you focus your dozer maintenance efforts? Here are the three steps you don't want to skip if your goal is better dozer performance and less machine downtime:

1. Perform an undercarriage walkaround every shift.

Undercarriage typically represents half of your dozer's parts and service costs. That's why inspecting it regularly is our No. 1 dozer maintenance tip. An undercarriage walkaround at the start of every shift is an easy way to prevent failures, extend life and lower operating costs. Here's what to check:

- Outside of tracks: Ensure no bolts are missing or coming loose.
- Link assembly and bushings: Keep an eye out for any abnormal scalloping or pitting.
- Sprockets: Look for mushrooming of the iron in the sprocket pocket.
- Idlers: Check for any ridging or abnormal un-shimming.
- Rollers: Make sure they're tight and free of debris.
- Carrier rollers: Don't allow any debris on the frame to clog up and prevent the roller from spinning.

2. Check track tension as part of your daily walkaround.

Did you know that too-tight track is the top cause of undercarriage-related dozer downtime? That's because it creates additional load, which can lead to oil loss, cause dry joints and reduce wear life. (Too-loose track is also a problem — you could end up throwing it off and waste time getting it back on.)

Good news: Checking and adjusting track tension on your dozer isn't difficult. Just follow these simple guidelines. And be sure to keep monitoring the tension as your working and weather conditions change. Even a little rain that causes wet soil can create packing in the sprockets and result in too-tight track.

3. Keep your undercarriage clean.

How often do you need to clean your undercarriage? It really depends on the material you're working in. Sand generally comes off easily on its own. Mud or clay, on the other hand, can build up until it's hard to remove. The best strategy is to keep an eye on cleanliness during your walkaround and remove any excess debris from the frame. When material gets packed into the undercarriage, it can cause the track to tighten and increase wear on moving components.

Bonus tip: Correct bad operating habits.

How you operate your dozer has a direct effect on how much maintenance you need to perform. To avoid premature wear and unnecessary service procedures, remind your dozer operators:

- Not to turn in the same direction all shift.
- Not to turn on steep slopes.
- Not to counter-rotate or make pivot turns.
- Not to spin the track.
- Not to travel in high speeds or too frequently in reverse.

Capitol Connection Q&A for Contractors

By Shauna Krause
Capitol Services, Inc

I will cross borders with our first two contractors and share some things we have in common. And some we do not! Here closer to home I will outline how an LLC gets to keep the license when unexpected departures occur and how to avoid losing one in a merger...

Q: Does Nevada have reciprocity with other States?

A: Nevada has reciprocity with some States. The reciprocity agreement allows for a waiver of the trade exam if the Qualifier has been actively licensed in one of the reciprocal states for the previous four years. Reciprocal states are Alabama, Arizona, California, Connecticut, Florida, Hawaii, Louisiana, New Mexico, North and South Carolina, Tennessee, and West Virginia. The Qualifier is still required to take the Construction Management exam.

Q: I am an electrical contractor in Nevada, I currently have a “C-2a” and “C-2g” license. I’ve had the license for over five years. Will I qualify for reciprocity for a “C-10” license in CA?

A: Unfortunately, the electrical classification is only reciprocal from NV to CA if you have the full “C-2” classification in Nevada for over five years. The sub-categories are not a part of the reciprocal agreement.

Q: I am a sign fabricator and installer and I just set up an LLC to run a new business. I have a friend who is a sign contractor with “C-45” license. Can he be the Responsible Managing Officer (RMO). to get another license for the LLC? And how can I keep the license under the LLC if my friend were to retire or something were to happen to him?

A: As long as your friend owns at least 20% of your LLC, then yes, he can qualify for both your LLC license and his own license at the same time. The LLC License will belong to the LLC, so if your friend retires or something happens to him, the license will remain with the LLC, and you’ll have 90 days to replace him with yourself or someone else.

Q: We have current licenses in CA, NV, and AZ for our corporation. We are planning to create a new LLC in which the existing corporation will be merged in to. Once the merger is complete, are we able to keep our license numbers in those States and how do we go about notifying the State Boards?

A: Each State is different with regards to the requirements for a merger. It sounds like you will most likely be able to re-assign your CA license to the LLC. However, Arizona and Nevada will require that you obtain new license numbers for the LLC. Please contact my office and we can discuss your particular situation in further detail.

While knowledge is power, knowing where to go for the answers is half the battle. Get expert assistance immediately when you call 866-443-0657, email info@cutredtape.com, or write us at Capitol Services, Inc., 3609 Bradshaw Rd, Ste H, #343, Sacramento, CA 95827. Search past columns at www.cutredtape.com.

Classified Ads are FREE to NCBE Members

Email a 35+/-word, job offer, or a link to your company job board. Ads must be construction-related and text-only. Please include the job title & a contact person. Email your ad to deb@ncbeonline.com, by Wednesday at 5 P.M. and we'll get your ad in *Building News*.

Please note: Residential property listings may not be included in the free classified ads. We do offer our members very low ad rates for this purpose, see your weekly Building News. You'll find the ad rate/size sheet on the page following the classified ad section.

Classified Ad Listings – Free to NCBE Members

WAREHOUSE MANAGER

LeDuc and Dexter Plumbing, Inc. is seeking professionals to join our team in continuing to grow and develop our business. We are a 40 year old, award winning company based in Santa Rosa, CA. Our company has built its reputation on delivering high quality plumbing services to our clients. Our high standards, expertise, and unwavering integrity have enabled us to develop many valuable relationships with General Contractors, Architects and Developers in the region. We enjoy a friendly, family oriented work environment and some of our team members have been here for over 25 years!

Duties and Responsibilities:

- Responsible for all warehouse logistics which includes shipping/receiving, inventory, purchasing and all relative documentation
- Keep all pricing current in the data base
- Pursue competitive material pricing opportunities and recommend bulk purchasing options
- Maintain Inventory levels and logistics within the warehouse
- Maintenance and maintain tools in a safe operating condition
- Coordinate material returns to vendors and monitor the associated credits
- Supervise, train and develop warehouse personnel and oversee daily operations
- Conducts performance evaluations, schedules and approves overtime, issues disciplinary actions, and resolves personnel issues
- Maintain warehouse stocking and staging areas
- Maintain vehicle maintenance and safety
- Maintain all safety and compliance standards
- Maintain proper forklift certifications
- Collaborate with management team to improve efficiencies
- Ensures warehouse yard and equipment are neat, clean and organized

Qualifications:

- A minimum of 5 years warehouse experience with 2 plus years of warehouse supervisory/manager skills
- PC skills with an emphasis in Microsoft Office required
- Knowledge of plumbing parts and equipment desirable
- Ability to work with all levels of management
- Detail oriented, with strong organizational, problem-solving, and analytical skills
- Versatility, flexibility, and a willingness to work within constantly changing priorities
- Ability to work independently, with others and handle multiple projects
- Good judgment in making timely and sound decisions
- Performs other duties as assigned

Physical/Mental Requirements:

- Perform all necessary bending, lifting, sitting for long periods of time
- Must pass drug screen, physical and have a clean DMV record

We offer our employees a competitive salary with benefits that include, 100% Gold plan paid premium for your Medical, Dental, and Vision. A retirement 401K with a company match. Paid vacation and sick time. We are always looking for talented individuals with the skills required to contribute to our continued growth and success. We are an Equal Opportunity Employer.
